Hematology Gene Test

SAMPLE
SUMMARY REPORT

HAEMATOLOGICAL DISORDERS

Predictive genetics can identify individuals at risk of hematological disorders, allowing for personalized care and treatment. It can guide reproductive decisions and revolutionize how we approach these conditions.

Red Blood Cell Disorder

- Aplastic Anaemia
- High-altitude Polycythemia
- Iron Deficiency Anaemia
- Sickle Cell Anaemia

Platelet Disorder

- Essential Thrombocytosis
- Immune Thrombocytopenia
- Von Willebrand Disease

Clotting Disorder

- Thrombophilia

Hematological Diseases

Red blood cell disorder

Traits		Risk	Rating	Description
	Aplastic Anemia	Slightly Elevated Risk	6.1	As per your genetics, you have a slightly elevated risk of developing aplastic anemia.
	Iron Deficiency Anemia	Slightly Elevated Risk	7.0	As per your genetics, you have a slightly elevated risk of developing iron-deficiency anemia.
	Sickle Cell Anemia	Typical Risk	6.0	As per your genetics, you have a typical risk of developing sickle cell anemia.
	High-altitude polycythemia	Typical Risk	5.3	As per your genetics, you have a typical risk of developing high-altitude polycythemia.

Platelet disorder

Traits		Risk	Rating	Description
	Von Willebrand Disease	Highly Elevated Risk	9.0	As per your genetics, you have a highly elevated risk of developing Von Willebrand disease.
	Immune thrombocytopenia	Slightly Elevated Risk	6.1	As per your genetics, you have a slightly elevated risk of developing immune thrombocytopenia.
	Essential Thrombocytosis	Typical Risk	5.8	As per your genetics, you have a typical risk of developing essential thrombocytosis.

Clotting disorder

Traits	Risk	Rating	Description
Thrombophilia	Typical Risk	5.0	As per your genetics, you have a typical risk of developing thrombophilia.
